RECLASSIFICATION OF FORMALDEHYDE IN THE EU

The Risk Assessment Committee (RAC)¹ decided on 7th December 2012 to classify formaldehyde as CMR² carcinogenic category 1B and category 2 mutagenic. Category 1B means that there is sufficient evidence for CMR properties, which could be detected in animals, but human carcinogenic is only suspected. This classification will be implemented in the EU until 1st January 2016 by the amending regulation ((EU(No.2016/491) according to the 6th ATP³ of CLP⁴-regulation. In the near future, it can be assumed that other countries/nations will follow and possibly adopt this classification. In particular this assumption considers Canada and the United States, where classification and potential ban of use of formaldehyde releasing substances in metalworking fluids have already been discussed over the last years.

Symbol and Signal word: Danger
GH508

1st January 2016, formaldehyde was reclassified as carcinogenic and mutagenic.

“ With the reclassification of formalin in terms of carcinogenicity, EU intends to ban the use of formalin.... ESP (European Society of Pathology) took seriously into consideration this issue...and have been trying to convince the European Parliament and the Council that they should make an exception so that pathology laboratories may continue to use this indispensable fixative.”

European Society of Pathology, Newsletter, winter 2017.

CMR-attribute	Classification of the substance	Classification of the mixture
mutagenity	muta.2; H341	conc. \geq 1% muta.2; H341*
carcinogenitycarc.	1B; H350	conc. \geq 0,1% carc. 1B; H350*

*H341: Can cause genetic defects. *H350 Can cause cancer

Problem and Risk

During the biopsy procedure in the operating room, surgeons and nurses are always exposed to a certain level of risk* when they handle biopsies with the traditional containers.

**Formalin might accidentally spill on the skin; its vapours might affect the respiratory system & the eyes. Long-term risks.*

Our Solution

Unlike any traditional container prefilled with formalin, with SecurBiop[®] the formalin is sealed in the cap by a membrane. In this way, operators will never get into any direct contact nor inhale any vapours of formalin when they open the container to insert the specimen.

Thanks to our patented** technology and design, SecurBiop[®] will ONLY release the formalin from its cap into the container once it is completely closed.

Designed by TRACES and produced by TECH IN GREEN, **SecurBiop®** containers prefilled with formalin, with an advanced «closed system» technology, provide the safest and most professional way to collect, transport and store biopsy specimens.

By prefilling formalin in the cap and sealing it with aluminum membrane, we prevent surgeons and nurses from getting into contact (both direct and indirect) with such carcinogenic chemical.

When it comes to the concept of formalin-risk-free prefilled container, SecurBiop® is the **ONLY** brand currently on the market providing a complete range of capacities, from 5 ml to 2000 ml...

...and we never stop updating and developing new products and accessories.

Insert the specimen into the empty container, then simply close it by screwing the cap. The formalin will automatically flow down from the top.

With 6 exclusive patents of TRACES, **SecurBiop®** and its unique design provide a perfectly hermetic sealing, preventing operators from facing all sorts of risks during biopsy procedures.

Cat No.	Description	Capacity	Packaging
SD10+10FISIO	Prefilled Container, 10ml 20% NBF + 10ml NS	20 ml	80 pcs / 20 /tray
S250	Prefilled Container, 250ml 10% NBF	250 ml	25 pcs / box
S2000	Prefilled Container, 2000ml 10% NBF	2000 ml	4 pcs / box

Enhance staff safety,
efficiency and
professionalism
during the biopsy
procedures
with SecurBiop[®]
Prefilled Biopsy
Containers.

SecurBiop[®] upgrades the safety level of the healthcare providers by eliminating any contact with formalin.

At the same time, we provide comprehensive solutions to equip your operating room and labs with the best products for the collection, transportation and storage of the specimens.

The work in the operating room is so important and delicate that a safe and hazard-free working environment is absolutely essential.

This is not only important for our healthcare providers' wellness, but it will also allow them to deliver their best performance to patients as well.
